

Trash Can and Recycling Container FIXING OPTIONS

Allows the receptacle to be fixed to its location with minimal ground works to existing surfaces.

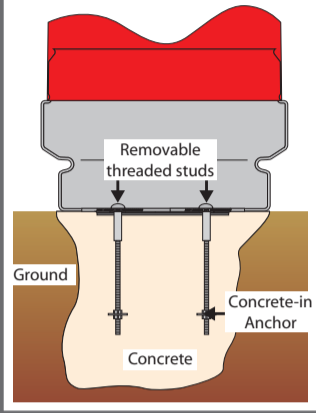

- ✓ Requires groundworks
- ✓ Provides additional resistance to vandalism & theft
- ✓ Ideal for external use
- ✓ Bolts for concrete foundations or paving slabs

Concrete-in Anchors (Adjustable Depth)

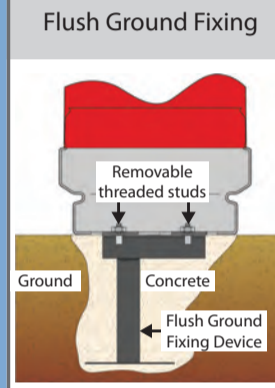

Use to overcome ground depth restrictions, optimize security, flexibility, and to eliminate surface bolts (when the bin has been removed).

- ✓ Requires groundworks
- ✓ Provides additional resistance to vandalism & theft
- ✓ Ideal for external use
- ✓ Anchors can be adjusted in length

Allows the receptacle to be sited flush with ground level, with minimized risk of trip hazards if removed.

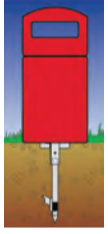

- ✓ Requires groundworks
- ✓ Provides additional resistance to vandalism & theft
- ✓ Ideal for external use
- ✓ Minimized trip hazard risk if the receptacle is removed

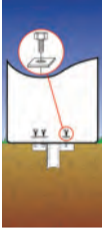

Ground-Lock™ System

Complete with a 'remove and re-site' locking system, best suited to receptacle sited on soft or unsurfaced ground.

- ✗ No groundworks required
- ✓ Provides additional resistance to vandalism & theft
- ✓ Ideal for external use on soft or unsurfaced ground
- ✓ Unique 'remove and re-site' locking system

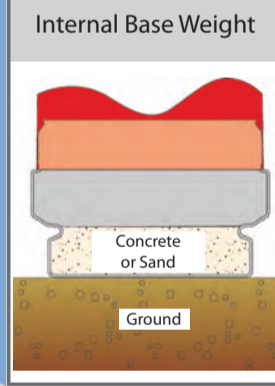

Trash can installed with Ground-Lock system.

Internal view of trash can showing bolt fixing to Ground-Lock system.

Adds weight to the base of the container to secure the receptacle without the need for groundworks.

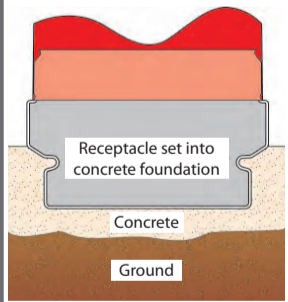

- ✗ No groundworks required
- ✓ Ideal for external or internal use

Concreting-in

Sets the receptacle base directly into the concrete to permanently fix it to the ground.

- ✓ Requires groundworks
- ✓ Provides additional resistance to vandalism & theft
- ✓ Ideal for external use
- ✓ Base set directly in the concrete (bolts not required)

Provides extra stability for the container in locations where groundworks are not appropriate.

- ✗ No groundworks required
- ✓ Ideal for marble or wooden flooring
- ✓ Ideal for external or internal use
- ✓ Provides a stable base for the bin
