

The Recycling Facts that Matter

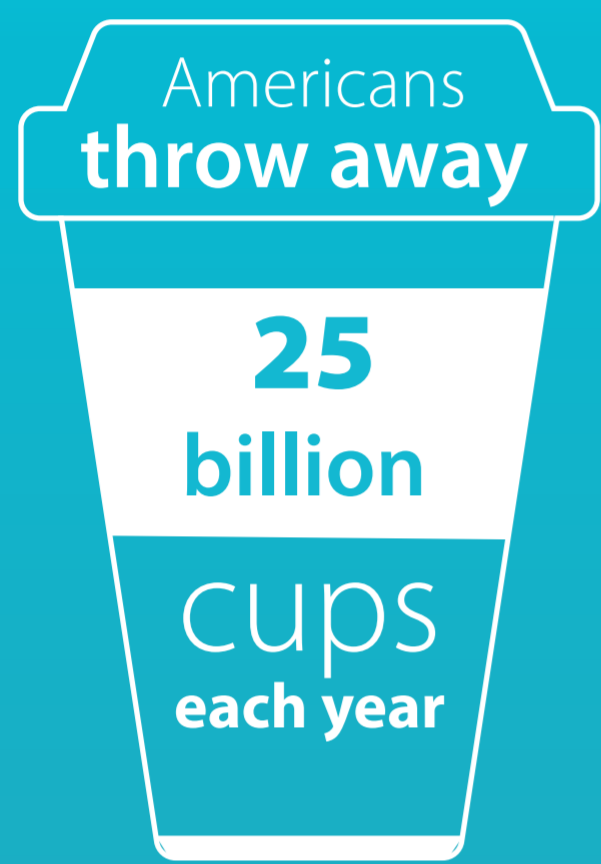

by Glasdon

Due to the toxic chemicals inside them waste batteries are classed as hazardous making **recycling the best option**

98.9% of lead-acid batteries are recycled in the U.S

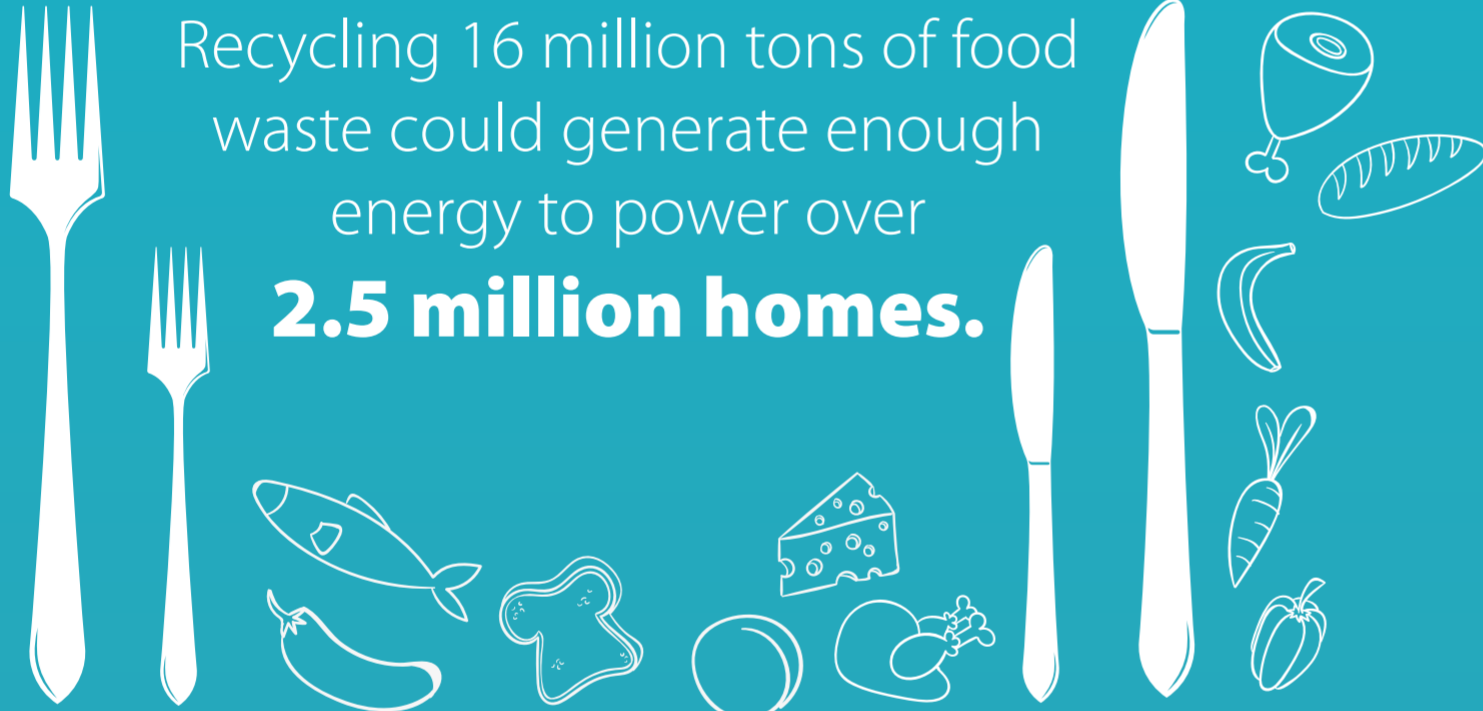

...as the lining makes them **difficult to recycle**
specialised recycling plants aim to tackle this issue in the U.S.

Recycling **just one** aluminum can will **save enough energy** to listen to a full album on an iPod

15% of all aluminum is still in circulation today

84% of household waste is recyclable

Glass bottles and jars are

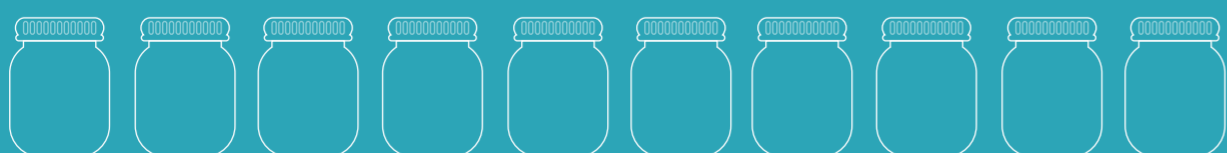

Recyclable

and can be recycled **unlimited times**

without losing quality

THE DAILY SUSTAINABILITY

Recycling just **500 books** could save **7,000 gallons** of water

Over **64%** of paper is currently recycled in the U.S.
